# Overview

HR and IT teams can work together seamlessly at all stages of the employee lifecycle with Ciph'r's Active Directory (AD) connector. By syncing HR and IT system data, this configurable service reduces the need for manual intervention during the employee onboarding and offboarding stages – ensuring system access is always up-to-date, and that your organisation's information is secure.

With tighter synchronisation of data and strong integrations between HR and IT systems, Ciph'r's AD Connector allows HR to assist IT with user creation when a new starter joins, making sure that all accounts are valid and automatically running the IT deactivation process for each leaver.

Sync HR and IT data automatically with Active Directory connector

## Key features

Configure the AD Connector to ensure automated processes meet your organisation's individual requirements:

- ✓ Automated AD updates to ensure systems are kept up to date
- ✓ Take relevant actions on AD accounts based on dates in your Ciph'r HR system (start dates, leave dates or other key dates)
- ✓ Automatically generate email addresses/mailboxes for new starters
- ✓ Establishes two-way data feed between AD and our HR software
- ✓ Take customised action using the AD service based on data within your Ciph'r HR software, such as job role or department, to match your existing policies
- ✓ Automatically notify IT via email whenever a change to an employee record may require management or an update

## Key benefits

- Streamlines and improves workflows
- One centralised source of information – saving time for both HR and IT teams
- Cloud-based configuration supports simple and efficient disaster recovery
- Ensures better data integrity through consistently updated and accurate information
